

COLLABORATE AGAINST CANCER

Collaborate against cancer

Minderoo Foundation anti-vaping brief

The reason for this brief

Collaborate against cancer is an initiative of the Minderoo Foundation with the mission to make cancer non-lethal, reduce incidence and mortality of preventable cancers.

They want to develop and execute a campaign highlighting the risks and consequences of vaping nicotine addiction in Australia.

The objectives of this brief

We want Australians aged 14-25 to confidently say no to vaping.

To significantly reduce the 32% of 14-25 year olds who try or take-up vaping.

Minderoo Foundation anti-vaping brief

Who are we talking to?

We are talking to kids and young Aussie adults 14–25 yr olds – one third of whom have already tried or taken up vaping. This audience has grown up in the post ‘war on smoking era’ and with no anti-smoking or vaping campaign in the last ten years, vaping has been free to shape its own story in a vacuum of truth and challenge.

Initially launched as a safe version of smoking, the vape industry has taken hold of this generation, not only getting many hooked, but ultimately recruiting them as the industry’s marketing and sales team. Influences have become the voice of the industry, Kid dealers have become the lead sales team, and everyday kids have been their ‘health experts’ perpetuating the myths that it is a healthy version of smoking or worse an antidote to a world of anxiety and depression.

This dynamic has created an echo chamber where it feels like the must do safe and sexy vice for a generation.

“... but just the number of people my age doing it, just like thousands and thousands and thousands, like you walk around the shopping centre, and every second person my age is vaping. It’s really this huge phenomenon. And so, you know I can’t help but think, there’s so many people doing it, surely it’s not that detrimental.”

– Jack*, 14–15yo, occasional vaper

“Yeah. Cos they, I think they’re so easily available. Like you can buy them online and stuff and get them shipped from China. People, like people our age sell them, and you can see it on their Snapchat they’re selling them.”

– Ella*, 16–17yo, occasional vaper

“It’s like when smoking was cool. Like everyone was doing it. That’s literally vaping, but 2021.”

– Sarah*, 15yo, occasional vaper

Minderoo Foundation anti-vaping brief

What's the consumer problem?

Launched as a safe version of smoking from a seemingly anonymous source, vaping has been able to grow in a vacuum free of truth and without challenge; branded, flavoured and socialised into aspiration. It feels like a safe and sexy habit to dabble with for many youth.

What's the insight to unlock the opportunity?

For a generation of cynics and sceptics who pride themselves on being able to call bullshit and see through false brand, social and government narratives; to take up vaping is to fall victim to exactly the kind of BS they love to call out.

Minderoo Foundation anti-vaping brief

Get (whom / target)	14-15 year old Aussie youth
Who (think / feel / do)	Who see vaping as a safe and cool habit to dabble in
To (do / think / feel)	See vaping as a culture / industry of exploitation profiting off their health
By (key message)	Helping them see vaping for what it is

Let's see vaping for what it really is

(a culture / industry of exploitation that feeds
off the health of a new generation)

Minderoo Foundation anti-vaping brief

Why should they believe it?

Manipulation

- Many influencers are getting paid to like vaping (by big tobacco)
- Fruity flavours are a deliberate ploy to target kids (they are big tobacco's kids' menu) and they help disguise chemicals found in cleaning products, nail polish remover, weed killer, and bug spray that lead to health damage (popcorn flavour = popcorn lung, blackberry flavour = black spots on lungs, strawberry flavour = red burst blood vessels)
- Vapes are being produced and incredibly low cost to ensure they are affordable for kids

Mental Health

- Anxiety, irritability, and trouble sleeping
- Nicotine causes damage to developing brains – affecting memory, concentration, learning, self-control, attention, and mood – and increases the risk of other addiction later in life

Speed

- Each vape pod is equivalent to a pack of cigarettes
- Vapes contain nicotine which is highly addictive (no, it's not objectophilia)

THE BRIEF TO YOU

Develop a creative solution that disrupts our 14-25yr audience in and around potential usage occasions i.e. pubs & clubs, festivals, at school, at point of sale, on building sites, at home.

Your creative solution can be inspired by any of the weeks of Open House; so could be an integrated advertising idea, a media partnership, a PR or socially-led idea, clever use of data or tech and/or an improvement to product, service or experience.

There is no right or wrong answer – we're just really interested in your strategic and creative thinking – how would you apply some of the things you've learnt from Open House to get to a clever solution to this brief?

Minderoo Foundation anti-vaping brief

Your submission

An Open House inspired creative solution including:

- Strategic setup – share any audience research, insights, customer journeys etc that has influenced your creative solution
- What the solution is – what platforms, technology and tools are used and why
- How the solution will help answer the brief and solve the challenge

Format:

- A PDF presentation of no more than 10 slides – please include a summary slide which will visually summarise your campaign
- Maximum word count of 1,500 words

Judging criteria

You will not be judged on the actual execution of your idea – quality of drawings, sketches or mock ups will not be marked. The aim is to clearly define your solution for the client. All responses must be original work.

Strategy: 30%

The strategic setup including additional audience research and insight.

Creativity: 30%

Is the creative solution innovative and surprising? What is the potential for impact?

Relevancy: 20%

Does the work answer the client's brief?

Execution & Effectiveness: 20%

Is there rigour in the execution. Would the campaign really work?
